Missing Time Stamp from the OgMap image topic?**Overall Rating:**

Hi Alen,

Is the OgMap from the "map_image/full" topic suppose to be time stamped? When I view things using ' rostopic echo map_image/full ' the seq of the ros message is incrementing but sec and nsec always remain at zero

RE: Missing Time Stamp from the OgMap image topic?

COLLAPSE

Overall Rating:

Hi Nicolas,

Well spotted, justification on why we have not addressed this follows:

Unfortunately the developers of the package did not populate the header with a timestamp. The package is open source and we could have fixed this omission. However, for those who download the package directly as a binary (vis sudo apt-get ros-indigo-local-map) this would not be fixed and would now introduce differences. Therefore, we have opted not to correct this problem for 2017 AUT. On evaluation the OgMap without timestamp should be sufficient for your tasks as long as you move the robot about slowly.

Alen
