[About this result](#) [Feedback](#)

### People also ask

#### What does CERR do in C++?

extern ostream **cerr**; Standard output stream for errors. Object of class ostream that represents the standard error stream oriented to narrow characters (of type char ). It corresponds to the C stream stderr . The standard error stream is a destination of characters determined by the environment.

### std::cerr, std::wcerr - cppreference.com

[en.cppreference.com/w/cpp/io/cerr](http://en.cppreference.com/w/cpp/io/cerr)

Jun 14, 2016 - The global objects std::cerr and std::wcerr control output to a stream buffer of implementation-defined type (derived from std::streambuf and std::wstreambuf, respectively), associated with the standard C error output stream stderr. These objects are guaranteed to be initialized during or before the first time an ...

<https://www.programiz.com/cpp-programming/library-function/iostream/cerr>

The **cerr** object in C++ is an object of class ostream. It is associated with the standard C error output stream stderr.

### C++ Basic Input/Output - TutorialsPoint

[https://www.tutorialspoint.com/cplusplus/cpp\\_basic\\_input\\_output.htm](https://www.tutorialspoint.com/cplusplus/cpp_basic_input_output.htm)

The **cerr** object is said to be attached to the standard error device, which is also a display screen but the object **cerr** is un-buffered and each stream insertion to **cerr** causes its output to appear immediately. The **cerr** is also used in conjunction with the stream insertion operator as shown in the following example.

### cerr/exit(1) How to? - C++ Forum - Cplusplus.com

[www.cplusplus.com/Forum/Beginners](http://www.cplusplus.com/Forum/Beginners)

Oct 31, 2010 - 4 posts - 2 authors

DrolArumil (43). Thanks for the help. So lets say im in windows, and I compile a program and it ends up executing exit(1). //If i type echo %errorlevel%, does that mean the command line should be in the same directory as my cpp file? edit: nm I figured it out. Is there a way to have all **cerr** output logged to a txt ...

### cerr - C++ Reference - Cplusplus.com

[www.cplusplus.com/Reference/iostream](http://www.cplusplus.com/Reference/iostream)

A program should not mix output operations on **cerr** with output operations on **wcerr** or **wclog** (or with other wide-oriented output operations on **stderr**): Once an output operation has been performed on either, the standard error stream acquires an orientation (either narrow or wide) that can only be safely changed by calling ...

In the **examples** above, it inserted the literal string Output sentence , the number 120 , and the value of variable x into the standard output stream **cout** . Notice that the sentence in the first statement is enclosed in double quotes ( " ) because it is a string literal, while in the last one, x is not. The double quoting is what makes ...

c++ - What are "cerr" and "stderr"? - Stack Overflow

<https://stackoverflow.com/questions/3200117/what-are-cerr-and-stderr> ▼  
Jul 8, 2010 - **cerr** is the C++ stream and **stderr** is the C file handle, both representing the standard error output. You write to them the same way you write to other streams and file handles: **cerr** << "Urk!\n";  
`fprintf (stderr, "Urk!\n");`. I'm not sure what you mean by "recover" in this context, the output goes to standard error and ...
