Doxygen commenting private members/functions

Overall Rating:

Hi Alen/Alex,

I was the one who brought up in class on Monday that Doxygen doesn't pick up comments for member variables and functions contained in Private. From memory you said you'd make mention of this on the discussion board. Have you decided yet what we should do about this?

Thanks!

RE: Doxygen commenting private members/functions

Overall Rating:

Changing the EXTRACT_PRIVATE in doxyfile to YES will include private members in documentation.

https://stackoverflowcom/questions/28261805/c-private-class-member-variables-dot-appear-in-the-documentation

I am not sure whether it is a requirement for documentation purposes to show private members comments.

As per in class discussion I'd suggest to comment all variables /methods,and inner works of the methods accessible (just like API's are commented).

comment private member variables (for D/HD levels), we can enable this on our end to display, the comments are visible as they appear in the code.

Select: <u>All</u> <u>None</u>
