Polling data

COLLAPSE

Overall Rating:

Hi Alen,

In the assignment sheet you ask to continuously poll the sensors for data, and in the assessment criteria it says " **User input of parameters works as expected, data values reported as per sensor description (values and timing)."** However there is no sampling time provided for the sensors. So how can we achieve this criteria?

Thanks!

RE: Polling data

Overall Rating:

Hi Aaron,

Many thanks for query, indeed we did not provide a sampling per sensor, given your not using threads at present all 3 sensors are assumed to provide data at same data rate otherwise with polling you would be bound to slowest sensor anyway, so this remark is irrelevant (timing neglected). Thanks for spotting this inconsistency.

Timing not the focus in A2,will be crucial for A3.
